**AMENDMENTS TO THE SPECIFICATION:**

**On page 4, replace lines 15-20 with the following paragraph to change referenced Docket to Patent No. 6654897 of Nov. 25, 2003 as follows:**

In the prior art, the system was always recalibrated from a stopped position. The system would be scan-initialized to a reset state and the calibration would begin when the clocks were started. The high-level sequence for the prior art calibration (described in ~~referenced Docket AT998212~~ U.S. Patent 6654897 of November 25, 2003 , entitled: Dynamic Wave-pipelined Interface Apparatus and Methods) included the steps of:
